

Yeonsung Kim -ykim103
DeogHun Kim (dkim109)

Instruction

1. Run the file with command "python mp2.py" if you want to run without saving the output
If you want to save the output, type "python mp2.py -g [filename]"
For example "python mp2.py -g output.txt"
2. You can type the command (join, find, leave, show, show all)
3. If you want to exit, type "exit"
4. If you type "exit" command, the program ends and the output file will be saved.
But if you exit with keyboard interruption, the file won't be saved so please type "exit" if you want to save the file
5. If you create output file, it will write every stdout to the file. So if you do "find command", the result of that command would be on that file.
